# EXPLORING ARCHITECTURE WITH AN EKISTICS APPROACH

Monday 06th May'24 to Friday 10th May'24  
5 Days Program

## OBJECTIVES

Applying Ekistics thinking enables breakdown the complexity of man-made environments for study and understanding their interrelatedness and interconnected nature. It also improves observation to a perceptive level in identifying problems and potentials that need intervention.

The knowledge of a subject that is often fragmented in syllabus form and allocated to teachers results in learning as isolated activity within the course.

The Ekistics workshop brings teachers of varying age and experience together irrespective of their assigned subject. Thus, there is mutual relationship with relevant understanding in value-based learning for the course.

## KEY TAKE-AWAY FOR PARTICIPANTS

Following are the key-takeaways for participants:

- Study of the Principles of Ekistics as the core structure of the program.
- To create an understanding of its application potential for the teachers of architecture.
- Raising mindful thought process of design for humane habitat.
